4.#Testing part--Sliver plating

The test is based on the following assumption: The sample plating is a single layer and each part is uniform. The test result maybe cannot stand for the physical truth of sample plating.

5.Reference information: Directive (EU) NO 757/2010

1)May not be placed on the market or used as a substance or constituent of preparations in a concentration equal to or higher than 0.001% by mass.

2)May not be placed on the market in semi-finished products or articles, or parts thereof, if the concentration of PFOS is equal to or higher than 0.1% by mass calculated with reference to the mass of structurally or microstructurally distinct parts that contain PFOS or, for textiles or other coated materials, if the amount of PFOS is equal to or higher than 1ug/m<sup>2</sup> of the coated material.
