product services

Central Semiconductor Corp. has manufactured discrete semiconductors since 1974. Satisfying engineers' most demanding design requirements and delivering exceptional service is a passion for the Central team. This dedication to complete customer satisfaction insures that Central's robust services offering will continue to expand, meeting the needs of global customers.

taping & reeling

Surface mount devices come standard on tape and reel. Certain through-hole products are available on tape and reel, in custom boxes, or in sleeves.

plating options

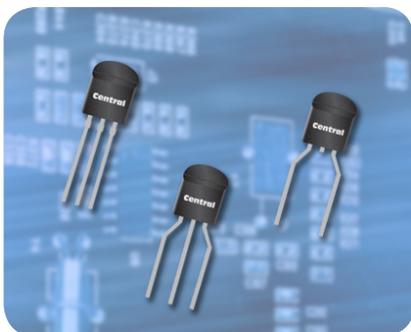

Lead plating conversion options are available for most through-hole devices. Leads may be stripped of lead or have lead added if required.

parametric electrical testing

Devices can be custom screened for specific electrical parameters, and provided in accordance with customer-specified requirements.

lead forming

Lead forming is available for the following packages:

- TO-92-18
- TO-92-5T
- TO-92-18R
- TO-92-5T 2LEAD
- TO-92-5
- TO-18LF

packing options

Each package type has a standard packing method, however, custom packing methods with custom labels may be available upon request.

vendor managed inventory

Central can handle your shipping and inventory requirements, including:

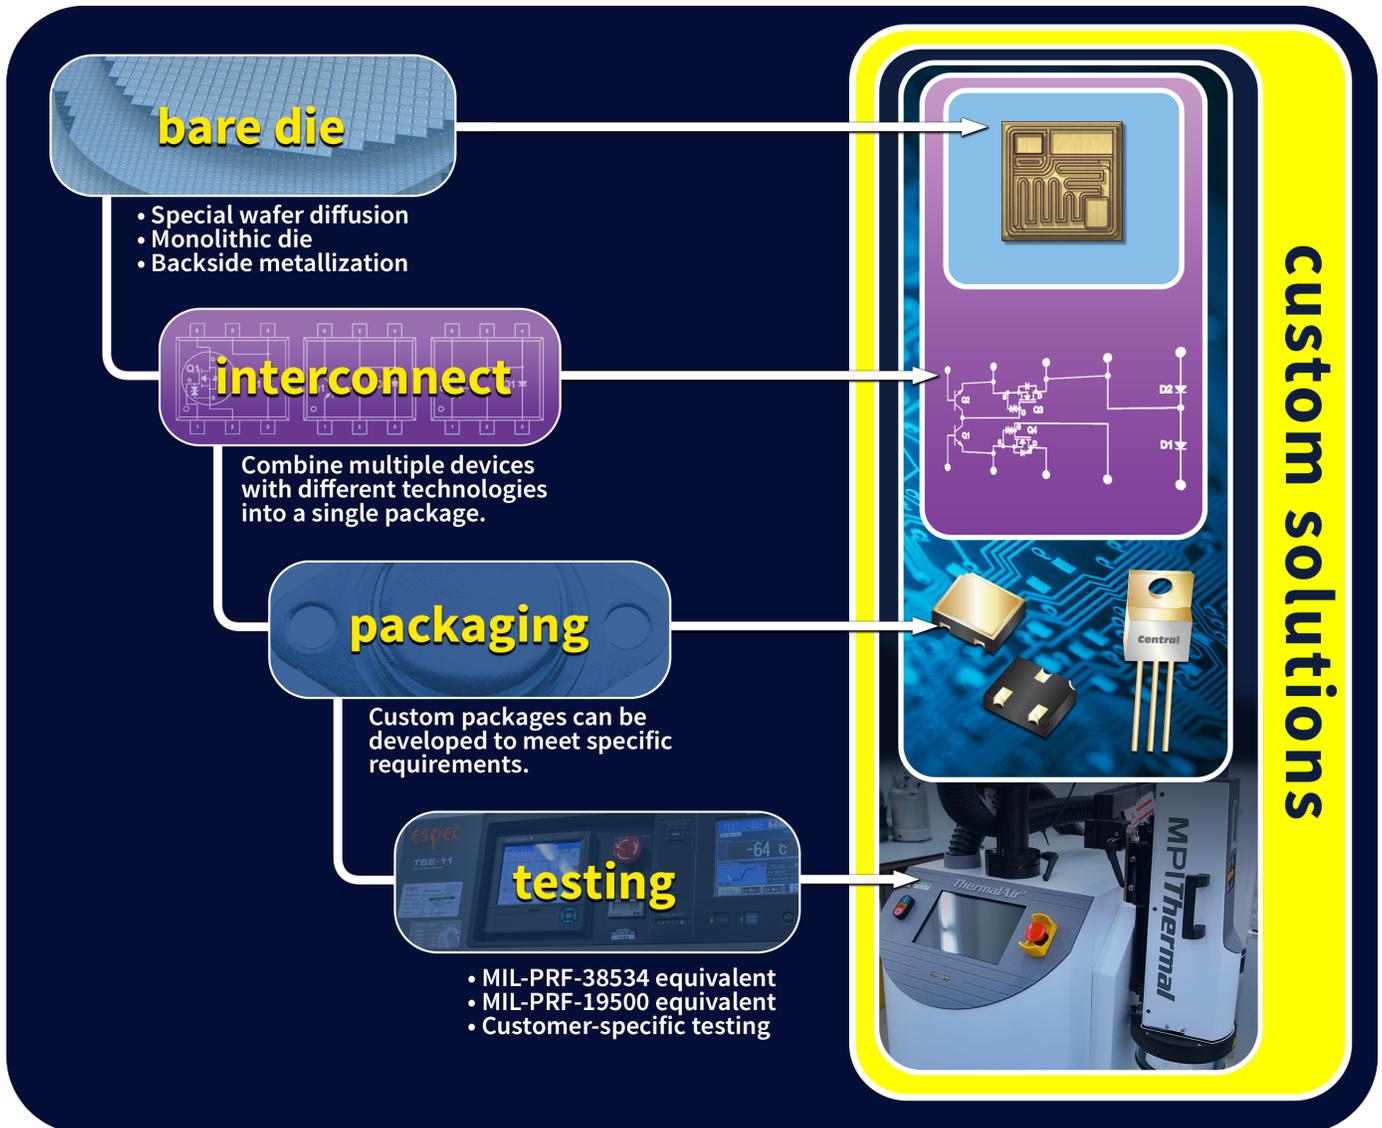

- Consolidated shipments
- Bonded inventory
- Online portal management
